Chapter 1

Main Page

Source Control

The projects source is managed in a private repository at github.

Project url: <https://github.com/mpakarlsson/ilearnrw>

Chapter 2

Doxygen

A Doxyfile for generating documentation can be found at `docs/Doxygen`.

Installation

Linux

todo: Provide installation documentation.

Windows

To build the documentation a couple of dependencies are required:

Name	Version	Url	Exe	Note
Doxygen	1.8.4	http://doxygen.org	doxygen.exe	-
Miktex	2.9.3759	http://miktex.org/download	tex.exe	Should work with other tex packages as well.
ghostscript	9.0.7	http://sourceforge.net/projects/ghostscript/	?	-
Graphviz (dot)	2.8	http://www.graphviz.org/	dot.exe	-

The exe files listed must be available in the windows `PATH%` variable.

Build documentation

Windows

To build the documentation run the `make_doc.bat` file located at `docs/make_doc.bat`.

The batchfile will run doxygen and then tex. The output `bin/doxygen/latex/refman.pdf` will be copied to `docs/doxygen.pdf`.

Chapter 3

DataLogger Log format

Following is a quick description about how data is, or will be, stored.

Users

Users are stored in the [UserStore](#). Initially the [UserStore](#) just uses Java serialization to write the User objects to disk. This requires that any objects that has a relationship (via class members) to the User object has to implement the `java.io.Serializable` interface.

This could be changed to a SQL backend in the future.

User Actions

The User actions are envisioned to be stored in a SQL database with a similar setup as described below.

Table UserActions:

Type	Name
PK	actionId
FK	userId
FK	marker
FK	applicationId
TimeStamp	timestamp
VARCHAR()	tag
VARCHAR()	value

This would result in SQL output similar to:

Id	Profile	Marker	Application	TimeStamp	Tag	Value
1	child1	Teach1	some_id	2013-06-14	ADD	cat
2	child1	child1	some_id	2013-06-14	REMOVE	cat

Using the `getUserActions()` function of the [IDataLogger](#) interface the database can be queried. To filter the result a [UserActionFilter](#) object is provided.

Chapter 4

Todo List

Group `DolphinTodo_20130619`

Implement `IProfileAccessUpdater`

DONE: Move interfaces to `DataLogger`

Implement all usecases provided by `IProfileAccessUpdater` into console application.

DONE: cleanup the code

DONE: Merge with the main branch.

Class `ilearnrw.datalogger.UserActionFilter`

Add getters/setters, appropriate functions etc.

Class `ilearnrw.datalogger.UserStore`

Replace storage backed with SQL database.

Enforce unique usernames.

Member `ilearnrw.datalogger.UserStore.update (User user)`

Don't allow multiple users with the same username.

Member `ilearnrw.games.NumbersToText.onSelected (ConsoleMenu menu)`

: it's the responsibility of the datalogger to save the actions

Class `ilearnrw.prototype.application.UserActions`

`getActions(filter)` should not return null? It's easier to return just an empty list

Class `ilearnrw.user.UserAction`

Add some documentation about this class.

Add get/setters

Member `ilearnrw.user.UserAction.createRandomDate (int startYear, int endYear)`

: remove these after testing `UserActions` with `UserActionFilter` enough

Member `ilearnrw.user.UserDetails.username`

Something to think about is whether this should be case-sensitive and if unicode should be supported. Unicode can create some headaches, there was a blog post about this recently (of which i only read the headline) see:

<http://labs.spotify.com/2013/06/18/creative-usernames/>

Group `OnlineResourceBankTodo`

: Could a resource consist of multiple items of the same type?

Chapter 5

Module Documentation

5.1 DolphinTodo_20130619

Todo Implement [IProfileAccessUpdater](#)

DONE: Move interfaces to [DataLogger](#)

Implement all usecases provided by [IProfileAccessUpdater](#) into console application.

DONE: cleanup the code

DONE: Merge with the main branch.

5.2 OnlineResourceBankTodo

Todo : Could a resource consist of multiple items of the same type?

Chapter 6

Namespace Documentation

6.1 Package ilearnrw

Packages

- package [application](#)
- package [datalogger](#)
[DataLogger](#) package.
- package [games](#)
- package [online](#)
- package [prototype](#)
- package [user](#)

6.2 Package ilearnrw.application

Classes

- class [ApplicationId](#)
[ApplicationId](#) identifies an application in different parts of the system.

6.3 Package ilearnrw.datalogger

[DataLogger](#) package.

Classes

- class [DataLogger](#)
- interface [IDataLogger](#)
Provides an interface for applications to log UserActions.
- interface [ILoginProvider](#)
- interface [IProfileAccessUpdater](#)
Interface to update profiles in the iLearnRW system.
- interface [IUserAdministration](#)
Provides User administration tasks.
- class [UserActionFilter](#)
- class [UserStore](#)
The [UserStore](#) is used to create and store user objects persistantly.

6.3.1 Detailed Description

[DataLogger](#) package. Four main interfaces has been defined at the moment.

1. [IDataLogger](#)
2. [ILoginProvider](#)
3. [IProfileAccessUpdater](#)
4. [IUserAdministration](#)

The [DataLogger](#) object implements [IDataLogger](#), [ILoginProvider](#) and [IProfileAccessUpdater](#).

See their respective documentation for details.

6.4 Package ilearnrw.games

Classes

- class [GameAddTwoNumbers](#)
- class [NumberProblems](#)
- class [NumbersToText](#)
- class [NumbersToTextHelper](#)
- class [UsersProvider](#)

6.5 Package ilearnrw.online

Packages

- package [resourcebank](#)

6.6 Package ilearnrw.online.resourcebank

Classes

- interface [IResource](#)
- interface [IResourceBank](#)
- interface [IResourceCollection](#)
- interface [ITeachingStrategy](#)

6.6.1 Detailed Description

Purpose

Excerpt from DOW ILearnRW (318803) 2012-06-22.pdf Page 49, point #7

On-line resource bank. A learning tool is useless when no appropriate learning material is available for it. The learning material should be readily available and accessible from everywhere, i.e., it should be on-line. The material should contain not only "isolated" titles of text. It should contain coherent collections of data which support specific teaching strategies and constitute well structured learning/intervention programs, forming a resource bank valuable to learners, educators and dyslexia professionals. The resource bank should be also to offer its customized views of its material to each

learner, based on the learner's profile, i.e., the resource bank should be profile-sensitive. That means, that the user will be able to browse the resource bank and view its content sorted according to the suitability/ appropriateness to her profile. In addition, the user should be able to issue search requests with her profile as one search argument, making in this way the reading activities more enjoyable.

Requirements

Needed resources

- A server.
- A database.

Required libraries

Functionality

The Online Resource Bank contains a number of Resources and a number of Teaching strategies. The Teaching strategies maps UserProblems to Resources.

A Resource combines multiple DataResources such as text, images and audio into a single resource.

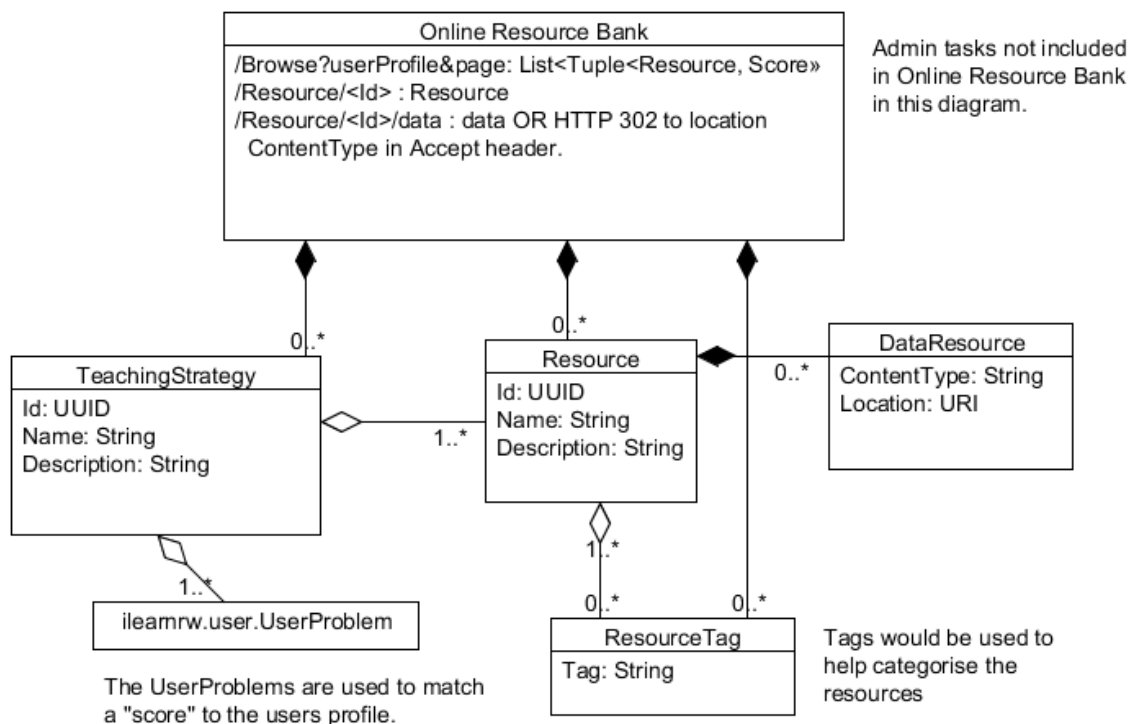

Figure 6.1: Online Resource Bank

RESTful API

The Online Resource Bank is designed to be a RESTful service. This means that no state is ever stored at the server and standard HTTP headers are utilized.

The clients connect to the service using standard HTTP. Since some information sent to the server encryption should always be enabled.

Authorization

A cookie named `Token` would have to be set to authenticate the current user.

```
Cookie: Token=<token>
```

Token

The token would be one of 2 things

1. An id in a lookup table on the Authorization server
2. Signed user information (with potential extra information)

Option 1 would require the Online Resource Bank to contact the authorization server to verify the token. In option 2 as long as the signature can be verified the token can be trusted to be valid.

The token could be stored in a cookie on the client and sent to the server in each request.

Tokens are excluded from the rest of the documentation but must be available in the implementation.

API

Note that how to administer the system has been ignored at the moment.

Browse

```
GET /browse?userProfile=<userProfile>&page=<pageNumber>&SupportedContentTypes=plain%2Ftext%2C%20audio%2Fmp
```

Returns a list of resources suited for the particular user. Note that we need to know what content types the client can handle. Accepted formats are `application/json`, `application/xml` and `plain/text`; `charset="utf8"`

GET of browse:

```
GET /browse?userProfile=<userProfile>&page=1&SupportedContentTypes=plain%2Ftext%2C%20audio%2Fmpeg
```

Response:

```
{
  "page": 1,
  "result": [
    {
      "name": "Resource 1",
      "description": "Resource 1 description",
      "score": 100
      "data": [
        ["plain/text; charset=\"utf8\"", 1233],
        ["audio/mpeg", 19393949],
        ["image/png", 29393]
      ]
    },
    ... (more resource objects)
  ]
}
```

Resources

```
GET /resource/<resource-id>
GET /resource/<resource-id>/data
```

Identifies the resource itself. This could be a piece of text, an audio clip etc. GET of resource:

```
GET /resource/<resource-id>
Accept: application/json
```

Response:

```

    ContentType: application/json

    {
      "name": "Resource 1",
      "description": "Resource 1 description",
      "data": [
        ["plain/text; charset=\"utf8\"", 1233],
        ["audio/mpeg", 19393949],
        ["image/png", 29393]
      ]
    }

```

To fetch the data of the resource in audio format:

```

GET /Resource/<resource-id>/data
Accept: audio/mpeg

```

Response:

```

HTTP/1.1 200 OK
Content-Type: audio/mpeg
Content-Length: xxx

```

Alternatively:

```

HTTP/1.1 302
Location: http://someServer/audio/someclip.mp3

```

Implementations for CREATE, PUT, POST and DELETE would allow administrative tasks to be done via an application or a web interface. Although the CREATE would just use `/Resource` as URI.

6.7 Package ilearnrw.prototype

Packages

- package [application](#)

6.8 Package ilearnrw.prototype.application

Classes

- class [ConsoleMenu](#)
- class [ConsoleMenuAction](#)
- class [DatabaseManager](#)
- class [Program](#)
- class [UserActions](#)
- class [UserActionsLog](#)
- class [UserGames](#)
- class [UserLogin](#)

Main menu of a logged in user.

- class [UserProblems](#)

6.9 Package ilearnrw.user

Packages

- package [mockup](#)
- package [problems](#)
- package [test](#)

Classes

- enum [GameAction](#)
- class [IlearnException](#)
- enum [LanguageCode](#)
- class [Tester](#)
- class [User](#)
- class [UserAction](#)
- class [UserDetails](#)
- class [UserPreferences](#)
- class [UserProblem](#)
- class [UserProblemsList](#)
- class [UserProfile](#)
- class [UserSession](#)

6.10 Package ilearnrw.user.mockup

Classes

- class [ProblemDefinitionIndexMockup](#)

6.11 Package ilearnrw.user.problems

Classes

- class [Category](#)
- class [ProblemDefinition](#)
- class [ProblemDefinitionIndex](#)
- interface [ProblemDefinitionIndexApi](#)
- class [ProblemNode](#)

6.12 Package ilearnrw.user.test

Classes

- class [MockupTests](#)
- class [UserTests](#)

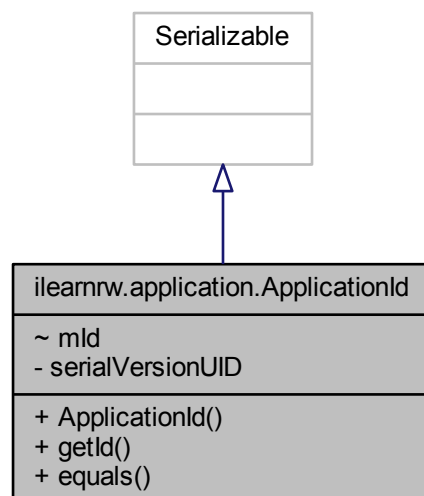

Chapter 7

Class Documentation

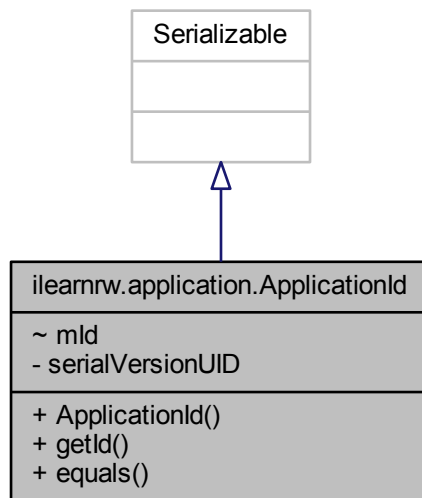

7.1 ilearnrw.application.ApplicationId Class Reference

[ApplicationId](#) identifies an application in different parts of the system.

Inheritance diagram for ilearnrw.application.ApplicationId:

Collaboration diagram for `ilearnrw.application.ApplicationId`:

Public Member Functions

- [ApplicationId](#) (String id)
- String [getId](#) ()
- boolean [equals](#) ([ApplicationId](#) id)

Package Attributes

- String [mld](#)

Static Private Attributes

- static final long [serialVersionUID](#) = 1L

7.1.1 Detailed Description

[ApplicationId](#) identifies an application in different parts of the system.

It should be a unique identifier

7.1.2 Constructor & Destructor Documentation

7.1.2.1 `ilearnrw.application.ApplicationId.ApplicationId (String id)`

7.1.3 Member Function Documentation

7.1.3.1 `boolean ilearnrw.application.ApplicationId.equals (ApplicationId id)`

7.1.3.2 String ilearnrw.application.ApplicationId.getId ()

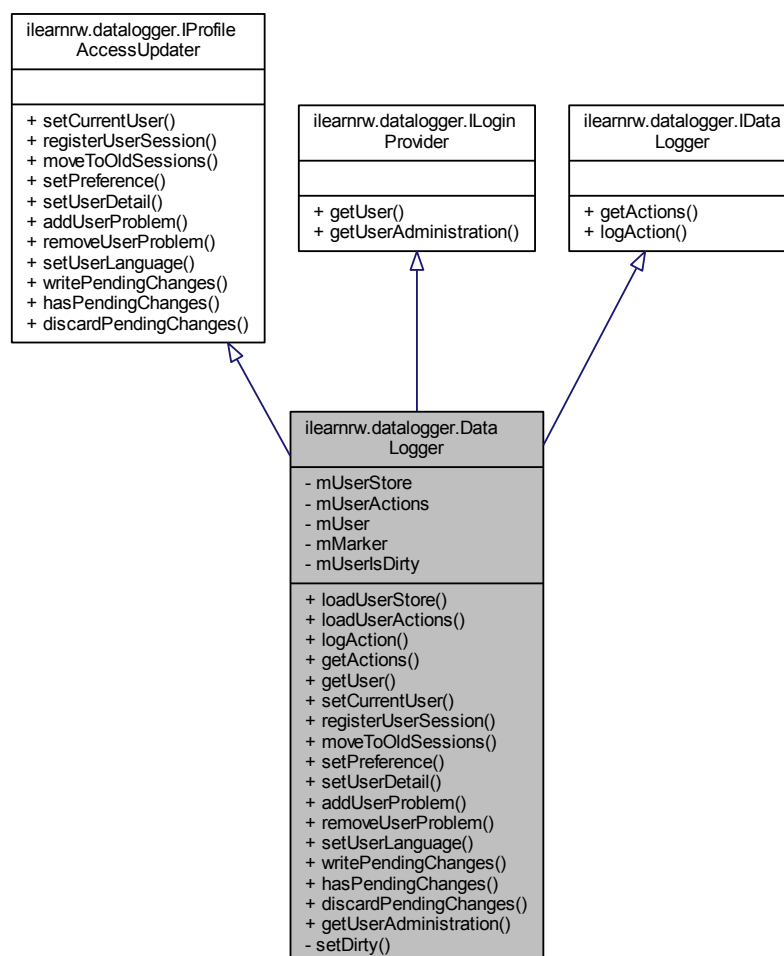

7.1.4 Member Data Documentation

7.1.4.1 String ilearnrw.application.ApplicationId.mld [package]

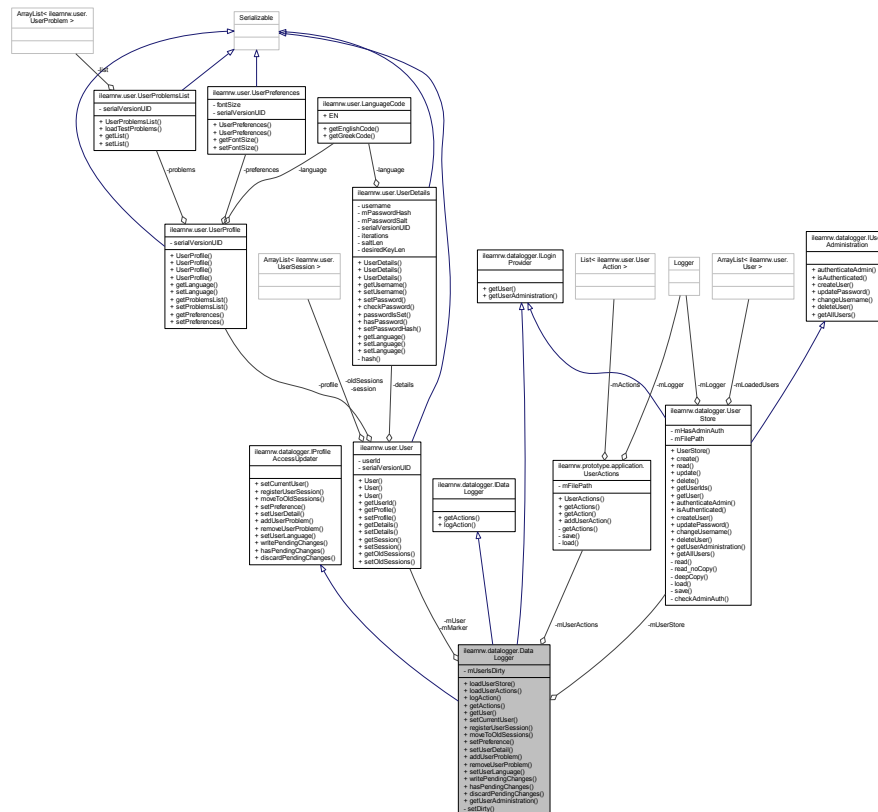

7.1.4.2 final long ilearnrw.application.ApplicationId.serialVersionUID = 1L [static],[private]

7.2 ilearnrw.datalogger.DataLogger Class Reference

Inheritance diagram for ilearnrw.datalogger.DataLogger:

Collaboration diagram for `ilearnrw.datalogger.DataLogger`:

Public Member Functions

- boolean [loadUserStore](#) (String filePath)
- boolean [loadUserActions](#) (String filePath)
- void [logAction](#) ([UserAction](#) action)

The Timestamp of the UserAction should be updated before the actions is stored. The timestamp should be local time of the server when this function is called. (Added some temporary code that generates random years within an interval since I needed to test the [UserActionFilter](#) date handling, remove it when done)

- List< [UserAction](#) > [getActions](#) ([UserActionFilter](#) filter)
- [User](#) [getUser](#) (String username, String password)
- void [setCurrentUser](#) ([User](#) user, [User](#) marker) throws [PermissionException](#), [PendingChangesAvailable](#)

Sets the userprofile to work with and who will be the *marker* for the changes.

- boolean [registerUserSession](#) ([UserSession](#) session)
- boolean [moveToOldSessions](#) ()
- boolean [setPreference](#) ([UserPreferences](#) preferences)
- boolean [setUserDetail](#) ([UserDetails](#) userDetails)
- boolean [addUserProblem](#) ([UserProblem](#) userProblem)
- boolean [removeUserProblem](#) ([UserProblem](#) userProblem)

Removes a ProblemDefinition.

- boolean [setUserLanguage](#) ([LanguageCode](#) language)
Sets the userlanguage.
- [User](#) [writePendingChanges](#) ()
Writes unwritten changes to the back end (persistent storage).
- boolean [hasPendingChanges](#) ()
Checks if there are any changes pending.
- void [discardPendingChanges](#) ()
- [IUserAdministration](#) [getUserAdministration](#) ()

Private Member Functions

- void [setDirty](#) ()

Private Attributes

- [UserStore](#) [mUserStore](#) = null
- [UserActions](#) [mUserActions](#) = null
- [User](#) [mUser](#) = null
- [User](#) [mMarker](#) = null
- boolean [mUserIsDirty](#) = false

7.2.1 Detailed Description

[DataLogger](#) class.

The Datalogger is the main object that Applications will use to query and update the user object and it's properties.

7.2.2 Member Function Documentation

7.2.2.1 boolean ilearnrw.datalogger.DataLogger.addUserProblem ([UserProblem](#) *userProblem*)

Adds a predefined ProblemDefinition to the user profile.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.2 void ilearnrw.datalogger.DataLogger.discardPendingChanges ()

Will discard the temporary user object.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.3 List<[UserAction](#)> ilearnrw.datalogger.DataLogger.getActions ([UserActionFilter](#) *filter*)

The list of user actions if you only are interested in the list of user actions

Implements [ilearnrw.datalogger.IDataLogger](#).

7.2.2.4 [User](#) ilearnrw.datalogger.DataLogger.getUser ([String](#) *username*, [String](#) *password*)

Gets a User object from a username and password.

Returns

A User object if successful. Otherwise null.

Implements [ilearnrw.datalogger.ILoginProvider](#).

7.2.2.5 IUserAdministration ilearnrw.datalogger.DataLogger.getUserAdministration ()

Implements [ilearnrw.datalogger.ILoginProvider](#).

7.2.2.6 boolean ilearnrw.datalogger.DataLogger.hasPendingChanges ()

Checks if there are any changes pending.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.7 boolean ilearnrw.datalogger.DataLogger.loadUserActions (String filePath)

Loads the UserActions from disk.

This has to be called during initialization.

Note

filePath does not have to exist. But the directory it is in has to.

Parameters

<i>filePath</i>	FilePath to a disk copy.
-----------------	--------------------------

Returns

true if successful. false if already loaded.

7.2.2.8 boolean ilearnrw.datalogger.DataLogger.loadUserStore (String filePath)

Loads the [UserStore](#) from disk.

This has to be called during initialization.

Note

filePath does not have to exist. But the directory it is in has to.

Parameters

<i>filePath</i>	FilePath to a disk copy.
-----------------	--------------------------

Returns

true if successful. false if already loaded.

7.2.2.9 void ilearnrw.datalogger.DataLogger.logAction (UserAction action)

The Timestamp of the UserAction should be updated before the actions is stored. The timestamp should be local time of the server when this function is called. (Added some temporary code that generates random years within an interval since I needed to test the [UserActionFilter](#) date handling, remove it when done)

Implements [ilearnrw.datalogger.IDataLogger](#).

7.2.2.10 boolean ilearnrw.datalogger.DataLogger.moveToOldSessions ()

Adds current sessions to old sessions.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.11 boolean ilearnrw.datalogger.DataLogger.registerUserSession (*UserSession session*)

Registers a new User session in the log.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.12 boolean ilearnrw.datalogger.DataLogger.removeUserProblem (*UserProblem userProblem*)

Removes a ProblemDefinition.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.13 void ilearnrw.datalogger.DataLogger.setCurrentUser (*User user*, *User marker*) throws **PermissionException**, **PendingChangesAvailable**

Sets the userprofile to work with and who will be the `marker` for the changes.

Doing this once saves the application from passing the userprofile to all functions.

The `marker` can be the same as the profile to be edited.

Exceptions

<i>PermissionException</i>	Thrown when the admin profile does not have permissions to update the profile.
<i>PendingChangesAvailable</i>	Thrown when there are pending changes are available.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.14 void ilearnrw.datalogger.DataLogger.setDirty () [private]**7.2.2.15** boolean ilearnrw.datalogger.DataLogger.setPreference (*UserPreferences preferences*)

Registers a change to the users preferences.

Should changes to user preferences be logged so that teachers/experts can be notified/see that a preference has been changed?

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.16 boolean ilearnrw.datalogger.DataLogger.setUserDetail (*UserDetails userDetails*)

Updates a UserDetail.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.17 boolean ilearnrw.datalogger.DataLogger.setUserLanguage (*LanguageCode Language*)

Sets the userlanguage.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.2.18 User `ilearnrw.datalogger.DataLogger.writePendingChanges ()`

Writes unwritten changes to the back end (persistent storage).

This will flush all pending operations in the same order as they are added. This is important if for example the same preference is set twice.

Returns

The new user after the changes has been applied.

Implements [ilearnrw.datalogger.IProfileAccessUpdater](#).

7.2.3 Member Data Documentation

7.2.3.1 User `ilearnrw.datalogger.DataLogger.mMarker = null [private]`

The `marker` to use when logging changes.

7.2.3.2 User `ilearnrw.datalogger.DataLogger.mUser = null [private]`

The current user to be updated.

7.2.3.3 UserActions `ilearnrw.datalogger.DataLogger.mUserActions = null [private]`

7.2.3.4 boolean `ilearnrw.datalogger.DataLogger.mUserIsDirty = false [private]`

Flag to keep track on whether `mUser` is dirty;

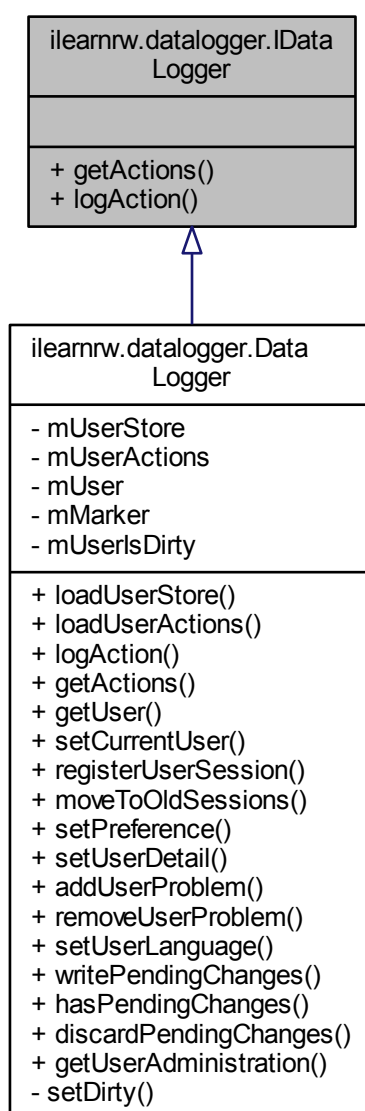

7.2.3.5 UserStore `ilearnrw.datalogger.DataLogger.mUserStore = null [private]`

The object that store users.

7.3 ilearnrw.datalogger.IDataLogger Interface Reference

Provides an interface for applications to log `UserActions`.

Inheritance diagram for ilearnrw.datalogger.IDataLogger:

Collaboration diagram for `ilearnrw.datalogger.IDataLogger`:

Public Member Functions

- List< [UserAction](#) > [getActions](#) ([UserActionFilter](#) filter)
- void [logAction](#) ([UserAction](#) action)

The Timestamp of the UserAction should be updated before the actions is stored. The timestamp should be local time of the server when this function is called. (Added some temporary code that generates random years within an interval since I needed to test the [UserActionFilter](#) date handling, remove it when done)

7.3.1 Detailed Description

Provides an interface for applications to log UserActions.

7.3.2 Member Function Documentation

7.3.2.1 List<UserAction> ilearnrw.datalogger.IDataLogger.getActions (UserActionFilter filter)

Given a [UserActionFilter](#) this function can return a list of UserActions.

Implemented in [ilearnrw.datalogger.DataLogger](#).

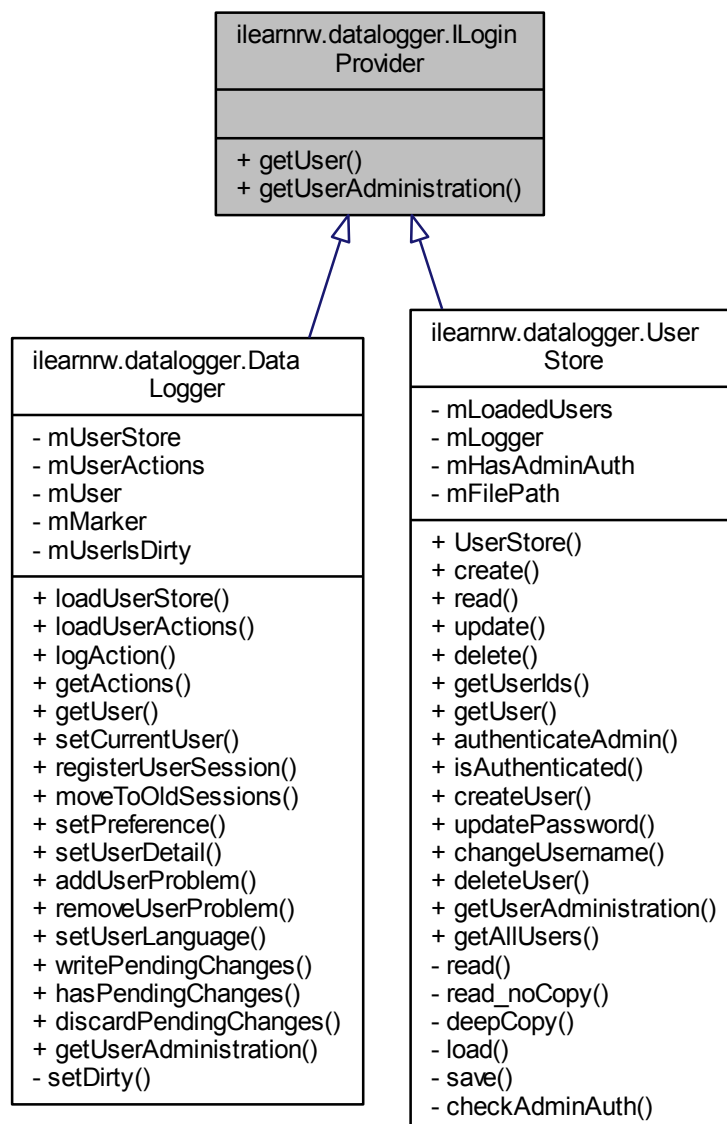

7.3.2.2 void ilearnrw.datalogger.IDataLogger.logAction (UserAction action)

The Timestamp of the UserAction should be updated before the actions is stored. The timestamp should be local time of the server when this function is called. (Added some temporary code that generates random years within an interval since I needed to test the [UserActionFilter](#) date handling, remove it when done)

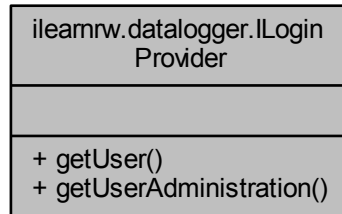

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.4 ilearnrw.datalogger.ILoginProvider Interface Reference

Inheritance diagram for ilearnrw.datalogger.ILoginProvider:

Collaboration diagram for `ilearnrw.datalogger.ILoginProvider`:

Public Member Functions

- [User](#) `getUser` (String username, String password)

Authenticates a User.

- [IUserAdministration](#) `getUserAdministration` ()

7.4.1 Member Function Documentation

7.4.1.1 User `ilearnrw.datalogger.ILoginProvider.getUser` (String username, String password)

Authenticates a User.

Implemented in [ilearnrw.datalogger.UserStore](#), and [ilearnrw.datalogger.DataLogger](#).

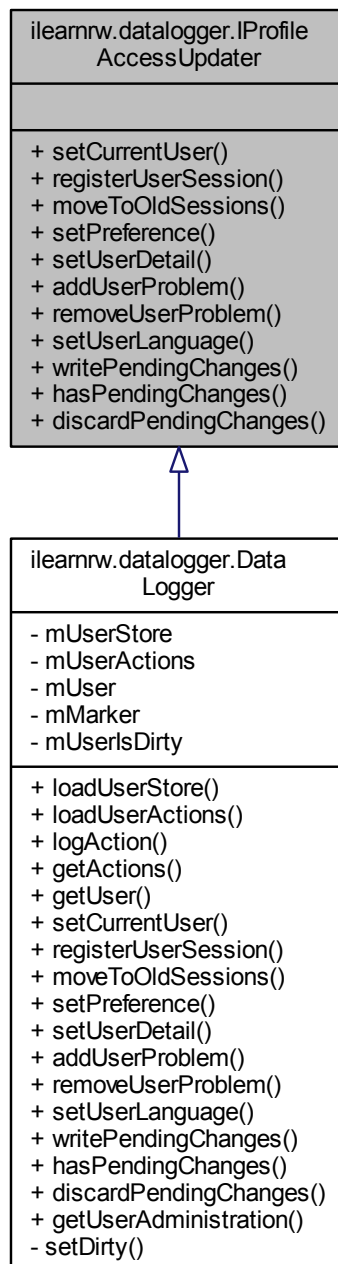

7.4.1.2 IUserAdministration `ilearnrw.datalogger.ILoginProvider.getUserAdministration` ()

Implemented in [ilearnrw.datalogger.UserStore](#), and [ilearnrw.datalogger.DataLogger](#).

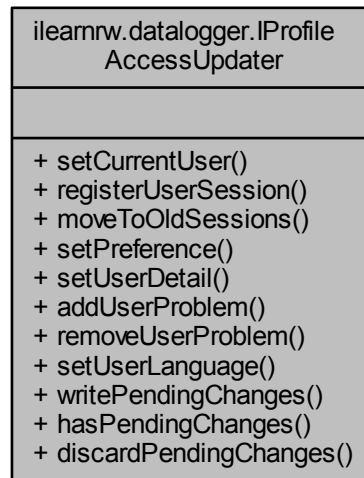

7.5 ilearnrw.datalogger.IProfileAccessUpdater Interface Reference

Interface to update profiles in the iLearnRW system.

Inheritance diagram for ilearnrw.datalogger.IProfileAccessUpdater:

Collaboration diagram for ilearnrw.datalogger.IProfileAccessUpdater:

Classes

- class [PendingChangesAvailable](#)
Indicates that an action cannot be performed due to pending changes.
- class [PermissionException](#)
The marker does not have permission to perform the requested change.

Public Member Functions

- void [setCurrentUser](#) ([User](#) user, [User](#) marker) throws [PermissionException](#), [PendingChangesAvailable](#)
*Sets the userprofile to work with and who will be the *marker* for the changes.*
- boolean [registerUserSession](#) ([UserSession](#) session)
Registers a new User session in the log.
- boolean [moveToOldSessions](#) ()
Adds current sessions to old sessions.
- boolean [setPreference](#) ([UserPreferences](#) preferences)
Registers a change to the users preferences.
- boolean [setUserDetail](#) ([UserDetails](#) userDetails)
Updates a UserDetail.
- boolean [addUserProblem](#) ([UserProblem](#) userProblem)
Adds a predefined ProblemDefinition to the user profile.
- boolean [removeUserProblem](#) ([UserProblem](#) userProblem)
Removes a ProblemDefinition.
- boolean [setUserLanguage](#) ([LanguageCode](#) Language)
Sets the userlanguage.
- [User](#) [writePendingChanges](#) ()
Writes unwritten changes to the back end (persistent storage).
- boolean [hasPendingChanges](#) ()

Checks if there are any changes pending.

- void [discardPendingChanges](#) ()

Discards all pending changes and resets the internal state.

7.5.1 Detailed Description

Interface to update profiles in the iLearnRW system.

This interface assumes that `Apps` would get a read-only copy of the users profile and would then have to use this interface to make changes to the profile. When the profile has been updated a new readonly copy would have to be fetched.

A nice side-effect is that we can make sure to log all changes to the profile.

Updater also manages

Registry - Handles/stores users/profiles.

Note

This is the interface that the application would use. Not an interface appropriate to a webservice. The implementer of this interface could still use a webservice to store the information in.

UserAdd/delete etc.. Get user (given userid, password)

7.5.2 Member Function Documentation

7.5.2.1 boolean ilearnrw.datalogger.IProfileAccessUpdater.addUserProblem (`UserProblem` *userProblem*)

Adds a predefined ProblemDefinition to the user profile.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.2 void ilearnrw.datalogger.IProfileAccessUpdater.discardPendingChanges ()

Discards all pending changes and resets the internal state.

In order to add new changes `setCurrentUser` has to be called again.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.3 boolean ilearnrw.datalogger.IProfileAccessUpdater.hasPendingChanges ()

Checks if there are any changes pending.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.4 boolean ilearnrw.datalogger.IProfileAccessUpdater.moveToOldSessions ()

Adds current sessions to old sessions.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.5 boolean ilearnrw.datalogger.IProfileAccessUpdater.registerUserSession (`UserSession` *session*)

Registers a new User session in the log.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.6 boolean ilearnrw.datalogger.IProfileAccessUpdater.removeUserProblem (*UserProblem userProblem*)

Removes a ProblemDefinition.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.7 void ilearnrw.datalogger.IProfileAccessUpdater.setCurrentUser (*User user*, *User marker*) throws *PermissionException*, *PendingChangesAvailable*

Sets the userprofile to work with and who will be the `marker` for the changes.

Doing this once saves the application from passing the userprofile to all functions.

The `marker` can be the same as the profile to be edited.

Exceptions

<i>PermissionException</i>	Thrown when the admin profile does not have permissions to update the profile.
<i>PendingChangesAvailable</i>	Thrown when there are pending changes are available.

Parameters

<i>user</i>	Profile of the user to update
<i>marker</i>	Profile of the user who is doing the update

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.8 boolean ilearnrw.datalogger.IProfileAccessUpdater.setPreference (*UserPreferences preferences*)

Registers a change to the users preferences.

Should changes to user preferences be logged so that teachers/experts can be notified/see that a preference has been changed?

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.9 boolean ilearnrw.datalogger.IProfileAccessUpdater.setUserDetail (*UserDetails userDetails*)

Updates a UserDetail.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.10 boolean ilearnrw.datalogger.IProfileAccessUpdater.setUserLanguage (*LanguageCode language*)

Sets the userlanguage.

Implemented in [ilearnrw.datalogger.DataLogger](#).

7.5.2.11 User ilearnrw.datalogger.IProfileAccessUpdater.writePendingChanges ()

Writes unwritten changes to the back end (persistent storage).

This will flush all pending operations in the same order as they are added. This is important if for example the same preference is set twice.

Returns

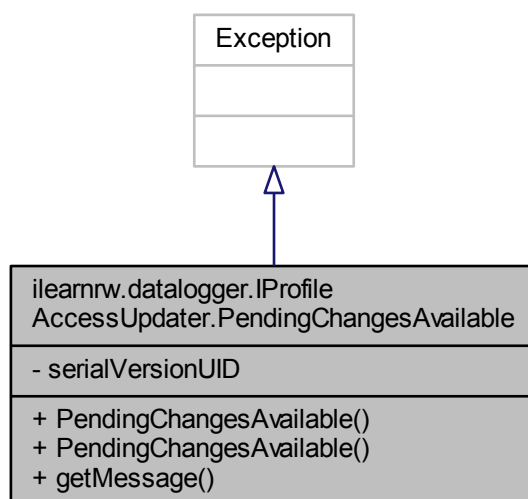

The new user after the changes has been applied.

Implemented in [ilearnrw.datalogger.DataLogger](#).

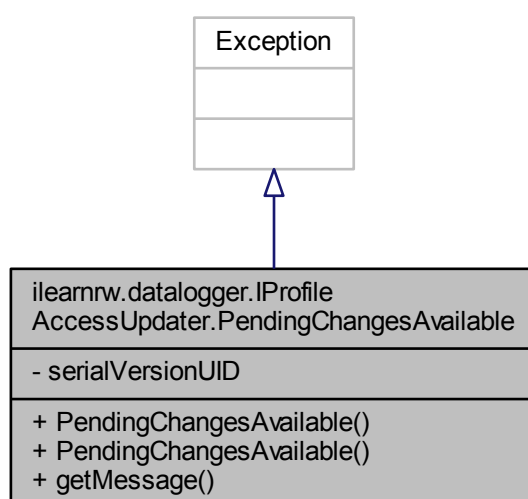

7.6 ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable Class Reference

Indicates that an action cannot be performed due to pending changes.

Inheritance diagram for ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable:

Collaboration diagram for ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable:

Public Member Functions

- [PendingChangesAvailable](#) (String message)
- [PendingChangesAvailable](#) (String message, Throwable throwable)
- String [getMessage](#) ()

Static Private Attributes

- static final long [serialVersionUID](#) = 1L

7.6.1 Detailed Description

Indicates that an action cannot be performed due to pending changes.

If the action was to be performed the pending changes would be lost.

7.6.2 Constructor & Destructor Documentation

7.6.2.1 `ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable.PendingChangesAvailable (String message)`

7.6.2.2 `ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable.PendingChangesAvailable (String message, Throwable throwable)`

7.6.3 Member Function Documentation

7.6.3.1 `String ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable.getMessage ()`

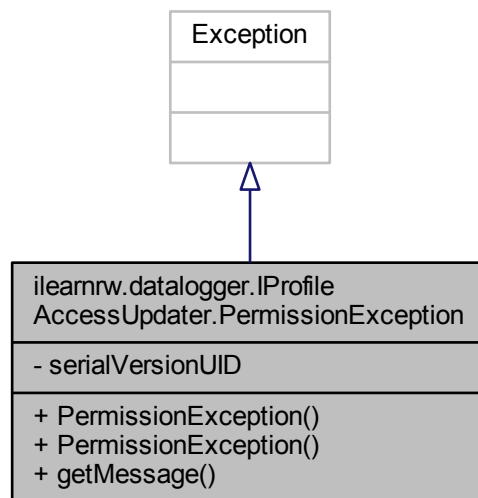

7.6.4 Member Data Documentation

7.6.4.1 `final long ilearnrw.datalogger.IProfileAccessUpdater.PendingChangesAvailable.serialVersionUID = 1L` `[static], [private]`

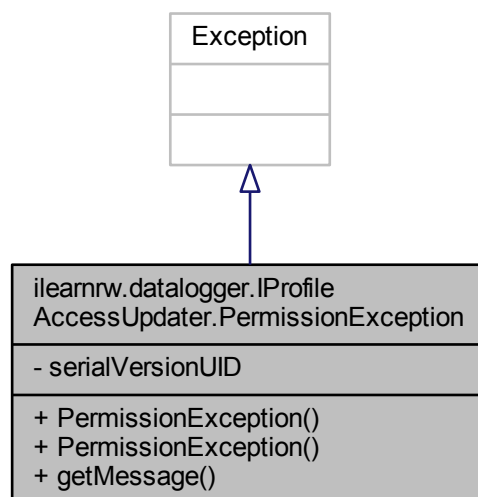

7.7 ilearnrw.datalogger.IProfileAccessUpdater.PermissionException Class Reference

The marker does not have permission to perform the requested change.

Inheritance diagram for ilearnrw.datalogger.IProfileAccessUpdater.PermissionException:

Collaboration diagram for ilearnrw.datalogger.IProfileAccessUpdater.PermissionException:

Public Member Functions

- [PermissionException](#) (String message)
- [PermissionException](#) (String message, Throwable throwable)
- String [getMessage](#) ()

Static Private Attributes

- static final long `serialVersionUID` = 1L

7.7.1 Detailed Description

The marker does not have permission to perform the requested change.

7.7.2 Constructor & Destructor Documentation

7.7.2.1 `ilearnrw.datalogger.IProfileAccessUpdater.PermissionException.PermissionException (String message)`

7.7.2.2 `ilearnrw.datalogger.IProfileAccessUpdater.PermissionException.PermissionException (String message, Throwable throwable)`

7.7.3 Member Function Documentation

7.7.3.1 `String ilearnrw.datalogger.IProfileAccessUpdater.PermissionException.getMessage ()`

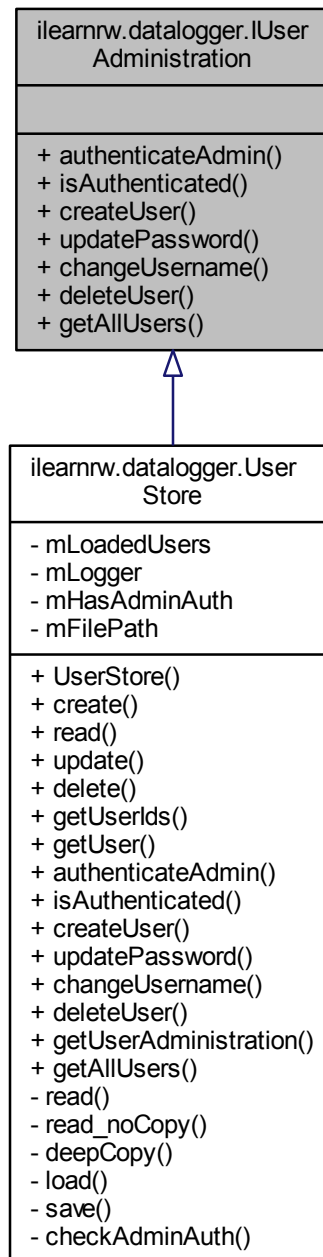

7.7.4 Member Data Documentation

7.7.4.1 `final long ilearnrw.datalogger.IProfileAccessUpdater.PermissionException.serialVersionUID = 1L` `[static],`
`[private]`

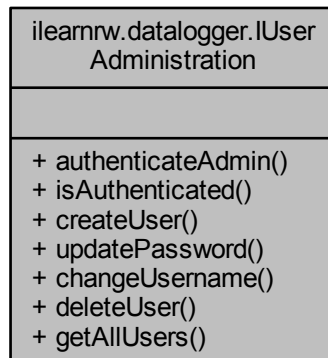

7.8 ilearnrw.datalogger.IUserAdministration Interface Reference

Provides User administration tasks.

Inheritance diagram for ilearnrw.datalogger.IUserAdministration:

Collaboration diagram for `ilearnrw.datalogger.IUserAdministration`:

Classes

- class [AuthenticationException](#)

The marker does not have permission to perform the requested change.

Public Member Functions

- void [authenticateAdmin](#) (String adminPassword) throws AuthenticationException
- boolean [isAuthenticated](#) ()
- [User](#) [createUser](#) (String username, String password) throws AuthenticationException
- [User](#) [updatePassword](#) (String username, String newPassword) throws AuthenticationException
- [User](#) [changeUsername](#) (String oldUsername, String newUsername) throws AuthenticationException
- boolean [deleteUser](#) (String username) throws AuthenticationException
- List< [User](#) > [getAllUsers](#) () throws AuthenticationException

7.8.1 Detailed Description

Provides User administration tasks.

7.8.2 Member Function Documentation

7.8.2.1 void `ilearnrw.datalogger.IUserAdministration.authenticateAdmin (String adminPassword)` throws `AuthenticationException`

Authenticates an Administrator by requiring a password.

Parameters

<i>adminPassword</i>	The administrator password. This could be set in a configuration file.
----------------------	--

Implemented in [ilearnrw.datalogger.UserStore](#).

7.8.2.2 User ilearnrw.datalogger.IUserAdministration.changeUsername (String *oldUsername*, String *newUsername*) throws AuthenticationException

Implemented in [ilearnrw.datalogger.UserStore](#).

7.8.2.3 User ilearnrw.datalogger.IUserAdministration.createUser (String *username*, String *password*) throws AuthenticationException

Creates a new User.

Parameters

<i>username</i>	
<i>password</i>	

Returns

The new User.

Implemented in [ilearnrw.datalogger.UserStore](#).

7.8.2.4 boolean ilearnrw.datalogger.IUserAdministration.deleteUser (String *username*) throws AuthenticationException

Implemented in [ilearnrw.datalogger.UserStore](#).

7.8.2.5 List<User> ilearnrw.datalogger.IUserAdministration.getAllUsers () throws AuthenticationException

Implemented in [ilearnrw.datalogger.UserStore](#).

7.8.2.6 boolean ilearnrw.datalogger.IUserAdministration.isAuthenticated ()

Implemented in [ilearnrw.datalogger.UserStore](#).

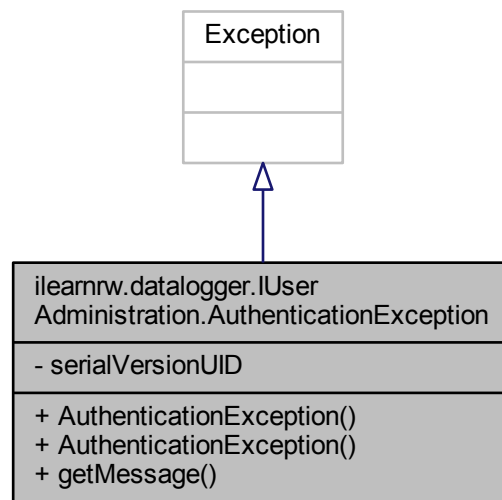

7.8.2.7 User ilearnrw.datalogger.IUserAdministration.updatePassword (String *username*, String *newPassword*) throws AuthenticationException

Implemented in [ilearnrw.datalogger.UserStore](#).

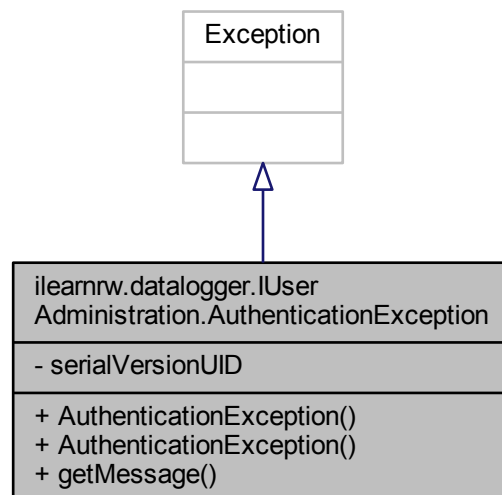

7.9 ilearnrw.datalogger.IUserAdministration.AuthenticationException Class Reference

The marker does not have permission to perform the requested change.

Inheritance diagram for ilearnrw.datalogger.IUserAdministration.AuthenticationException:

Collaboration diagram for ilearnrw.datalogger.IUserAdministration.AuthenticationException:

Public Member Functions

- [AuthenticationException](#) (String message)
- [AuthenticationException](#) (String message, Throwable throwable)
- String [getMessage](#) ()

Static Private Attributes

- static final long `serialVersionUID` = 1L

7.9.1 Detailed Description

The marker does not have permission to perform the requested change.

7.9.2 Constructor & Destructor Documentation

7.9.2.1 `ilearnrw.datalogger.IUserAdministration.AuthenticationException.AuthenticationException (String message)`

7.9.2.2 `ilearnrw.datalogger.IUserAdministration.AuthenticationException.AuthenticationException (String message, Throwable throwable)`

7.9.3 Member Function Documentation

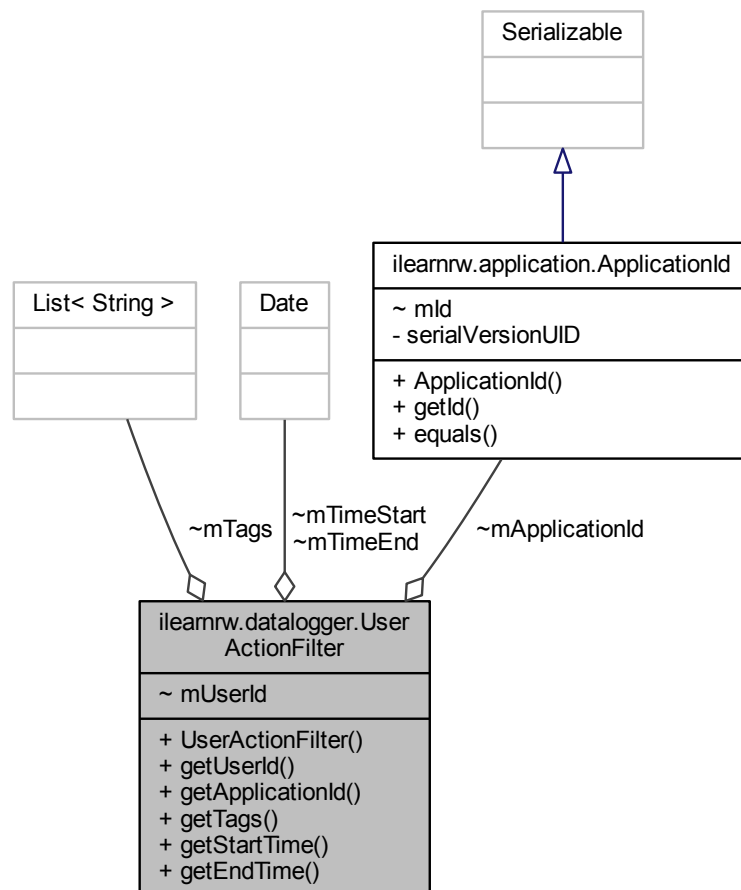

7.9.3.1 `String ilearnrw.datalogger.IUserAdministration.AuthenticationException.getMessage ()`

7.9.4 Member Data Documentation

7.9.4.1 `final long ilearnrw.datalogger.IUserAdministration.AuthenticationException.serialVersionUID = 1L` `[static],`
`[private]`

7.10 ilearnrw.datalogger.UserActionFilter Class Reference

Collaboration diagram for ilearnrw.datalogger.UserActionFilter:

Public Member Functions

- [UserActionFilter](#) (int userId, [ApplicationId](#) appld, Date start, Date end, List< String > tags)
- int [getUserId](#) ()
- [ApplicationId](#) [getApplicationId](#) ()
- List< String > [getTags](#) ()
- Date [getStartTime](#) ()
- Date [getEndTime](#) ()

Package Attributes

- int [mUserId](#)
- [ApplicationId](#) [mApplicationId](#)
- List< String > [mTags](#)
- Date [mTimeStart](#)
- Date [mTimeEnd](#)

7.10.1 Detailed Description

The [UserActionFilter](#) is used to query the datalogger for information

Todo Add getters/setters, appropriate functions etc.

7.10.2 Constructor & Destructor Documentation

7.10.2.1 `ilearnrw.datalogger.UserActionFilter.UserActionFilter (int userId, ApplicationId appld, Date start, Date end, List<String> tags)`

Creates a filter that is used on the UserAction list

Parameters

--	--

7.10.3 Member Function Documentation

7.10.3.1 `ApplicationId ilearnrw.datalogger.UserActionFilter.getApplicationId ()`

7.10.3.2 `Date ilearnrw.datalogger.UserActionFilter.getEndTime ()`

7.10.3.3 `Date ilearnrw.datalogger.UserActionFilter.getStartTime ()`

7.10.3.4 `List<String> ilearnrw.datalogger.UserActionFilter.getTags ()`

7.10.3.5 `int ilearnrw.datalogger.UserActionFilter.getUserId ()`

7.10.4 Member Data Documentation

7.10.4.1 `ApplicationId ilearnrw.datalogger.UserActionFilter.mApplicationId` [package]

7.10.4.2 `List<String> ilearnrw.datalogger.UserActionFilter.mTags` [package]

7.10.4.3 `Date ilearnrw.datalogger.UserActionFilter.mTimeEnd` [package]

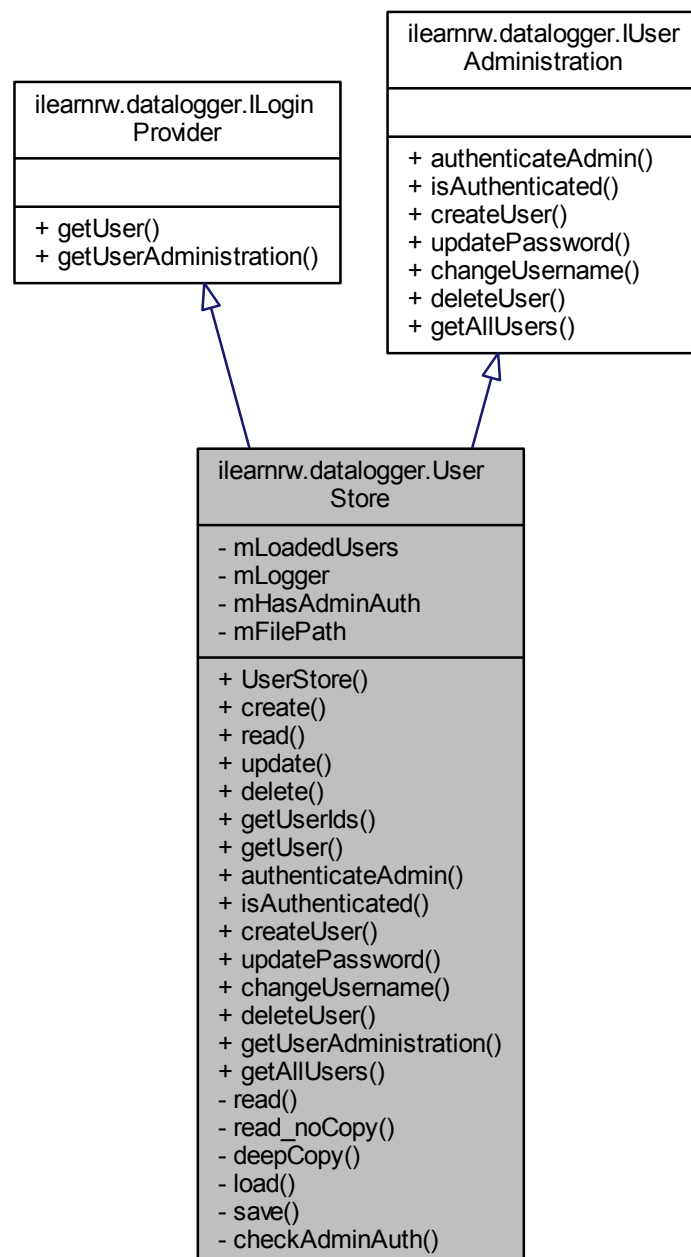

7.10.4.4 `Date ilearnrw.datalogger.UserActionFilter.mTimeStart` [package]

7.10.4.5 `int ilearnrw.datalogger.UserActionFilter.mUserId` [package]

7.11 ilearnrw.datalogger.UserStore Class Reference

The [UserStore](#) is used to create and store user objects persistantly.

Inheritance diagram for ilearnrw.datalogger.UserStore:

Collaboration diagram for ilearnrw.datalogger.UserStore:

Public Member Functions

- [UserStore](#) (String filePath)
- [User create](#) ()
- [User read](#) (int userId)
- [User update](#) ([User](#) user)
- boolean [delete](#) (int userId)
- LinkedList< Integer > [getUserIds](#) ()
- [User getUser](#) (String username, String password)
Authenticates a User.
- void [authenticateAdmin](#) (String adminPassword) throws AuthenticationException
- boolean [isAuthenticated](#) ()
- [User createUser](#) (String username, String password) throws AuthenticationException
- [User updatePassword](#) (String username, String newPassword) throws AuthenticationException
- [User changeUsername](#) (String oldUsername, String newUsername) throws AuthenticationException
- boolean [deleteUser](#) (String username) throws AuthenticationException
- [IUserAdministration getUserAdministration](#) ()
- List< [User](#) > [getAllUsers](#) () throws AuthenticationException

Private Member Functions

- [User read](#) (String username)

- [User read_noCopy](#) (int userId)
- [User deepCopy](#) ([User](#) user)
- void [load](#) ()
Loads the serialized objects in `mFilePath` into `mLoadedUsers`.
- void [save](#) ()
Serializes `mLoadedUsers` into `mFilePath`
- void [checkAdminAuth](#) () throws `AuthenticationException`

Private Attributes

- `ArrayList< User > mLoadedUsers`
- Logger [mLogger](#)
- boolean [mHasAdminAuth](#) = false

Static Private Attributes

- static String [mFilePath](#)
The complete path to the file to read/write the user information from/to.

7.11.1 Detailed Description

The [UserStore](#) is used to create and store user objects persistantly.

Todo Replace storage backed with SQL database.
Enforce unique usernames.

Note

At the moment Java's built in serialization is used to store users to disk. This requires all objects to be stored to implement the `Serializable` interface.

Implements a CRUD interface for users and save/load functions to store the data persistently.

7.11.2 Constructor & Destructor Documentation

7.11.2.1 `ilearnrw.datalogger.UserStore.UserStore (String filePath)`

Parameters

<i>filePath</i>	The full path to the file to use to store the user profiles etc.
-----------------	--

7.11.3 Member Function Documentation

7.11.3.1 `void ilearnrw.datalogger.UserStore.authenticateAdmin (String adminPassword)` throws `AuthenticationException`

Authenticates an Administrator by requiring a password.

Parameters

<i>adminPassword</i>	The administrator password. This could be set in a configuration file.
----------------------	--

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.2 User ilearnrw.datalogger.UserStore.changeUsername (String *oldUsername*, String *newUsername*) throws AuthenticationException

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.3 void ilearnrw.datalogger.UserStore.checkAdminAuth () throws AuthenticationException [private]

7.11.3.4 User ilearnrw.datalogger.UserStore.create ()

Create a new user.

Will generate a new UserId for the user.

Returns

A new User object.

7.11.3.5 User ilearnrw.datalogger.UserStore.createUser (String *username*, String *password*) throws AuthenticationException

Creates a new User.

Parameters

<i>username</i>	
<i>password</i>	

Returns

The new User.

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.6 User ilearnrw.datalogger.UserStore.deepCopy (User *user*) [private]

Returns a copy of a User object

This is called from functions returning a user in this class since we do not want to give out the actual reference stored in the `_loadedUsers` list.

7.11.3.7 boolean ilearnrw.datalogger.UserStore.delete (int *userId*)

Deletes a user from the store.

Parameters

<i>userId</i>	userId of the user to delete
---------------	------------------------------

Returns

true if successful.

7.11.3.8 **boolean** `ilearnrw.datalogger.UserStore.deleteUser (String username)` throws **AuthenticationException**

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.9 **List<User>** `ilearnrw.datalogger.UserStore.getAllUsers ()` throws **AuthenticationException**

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.10 **User** `ilearnrw.datalogger.UserStore.getUser (String username, String password)`

Authenticates a User.

Implements [ilearnrw.datalogger.ILoginProvider](#).

7.11.3.11 **IUserAdministration** `ilearnrw.datalogger.UserStore.getUserAdministration ()`

Implements [ilearnrw.datalogger.ILoginProvider](#).

7.11.3.12 **LinkedList<Integer>** `ilearnrw.datalogger.UserStore.getUserIds ()`

Returns

A list of all stored userids.

7.11.3.13 **boolean** `ilearnrw.datalogger.UserStore.isAuthenticated ()`

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.3.14 **void** `ilearnrw.datalogger.UserStore.load ()` [private]

Loads the serialized objects in `mFilePath` into `mLoadedUsers`.

7.11.3.15 **User** `ilearnrw.datalogger.UserStore.read (int userId)`

Reads a User from the [UserStore](#)

Parameters

<i>userId</i>	The userId of the user to load
---------------	--------------------------------

Returns

The user with `userId == userId`

7.11.3.16 **User** `ilearnrw.datalogger.UserStore.read (String username)` [private]

7.11.3.17 **User** `ilearnrw.datalogger.UserStore.read_noCopy (int userId)` [private]

7.11.3.18 **void** `ilearnrw.datalogger.UserStore.save ()` [private]

Serializes `mLoadedUsers` into `mFilePath`

7.11.3.19 User ilearnrw.datalogger.UserStore.update (User user)

Updates the user currently stored with the one supplied.

Todo Don't allow multiple users with the same username.

Parameters

<i>user</i>	The new user copy to store.
-------------	-----------------------------

Returns

A new copy of the user object.

7.11.3.20 User ilearnrw.datalogger.UserStore.updatePassword (String username, String newPassword) throws AuthenticationException

Implements [ilearnrw.datalogger.IUserAdministration](#).

7.11.4 Member Data Documentation

7.11.4.1 String ilearnrw.datalogger.UserStore.mFilePath [static], [private]

The complete path to the file to read/write the user information from/to.

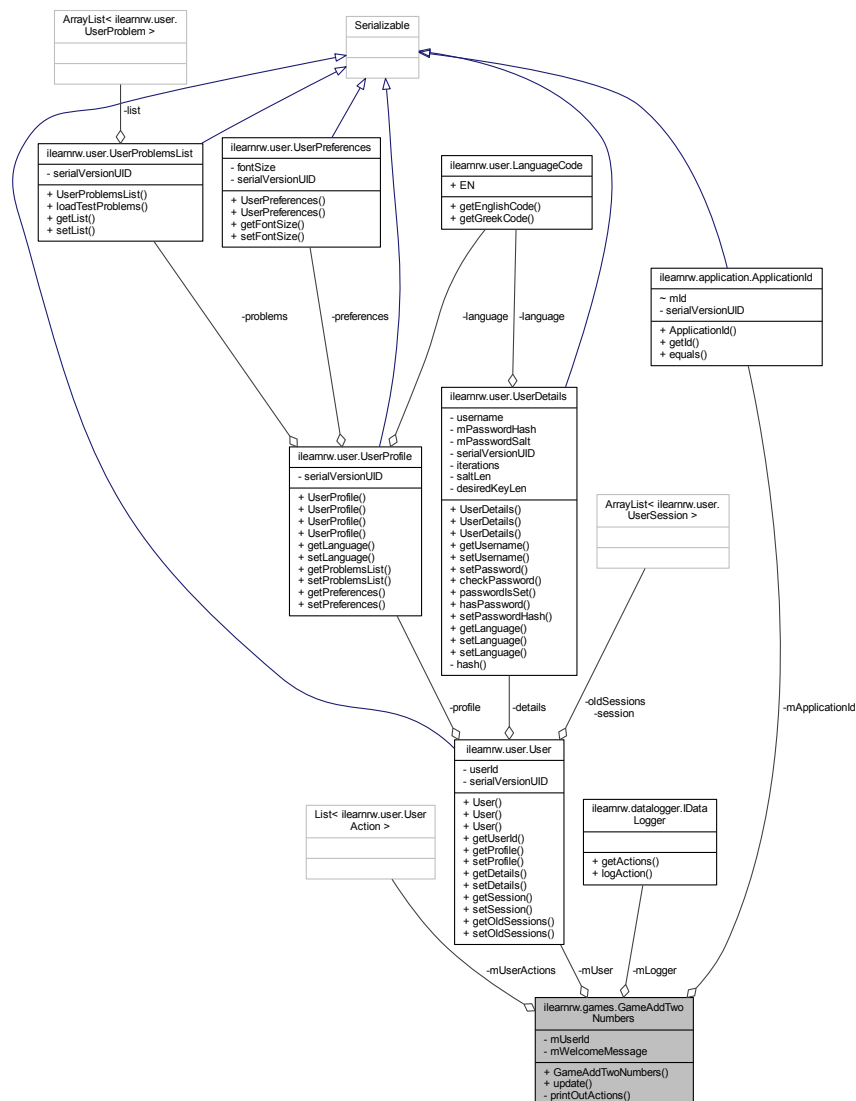

7.11.4.2 boolean ilearnrw.datalogger.UserStore.mHasAdminAuth = false [private]

7.11.4.3 ArrayList<User> ilearnrw.datalogger.UserStore.mLoadedUsers [private]

7.11.4.4 Logger ilearnrw.datalogger.UserStore.mLogger [private]

7.15.1 Detailed Description

This class will convert numeric values into an english representation

For units, see : <http://www.jimloy.com/math/billion.htm>

Author

yanick.rochon@gmail.com

7.15.2 Member Function Documentation

7.15.2.1 static void `ilearnrw.games.NumbersToTextHelper.main (String... args)` `[static]`

7.15.3 Member Data Documentation

7.15.3.1 `AbstractProcessor` `ilearnrw.games.NumbersToTextHelper.processor` `[static]`

7.15.3.2 `Scale` `ilearnrw.games.NumbersToTextHelper.SCALE = Scale.SHORT` `[static]`

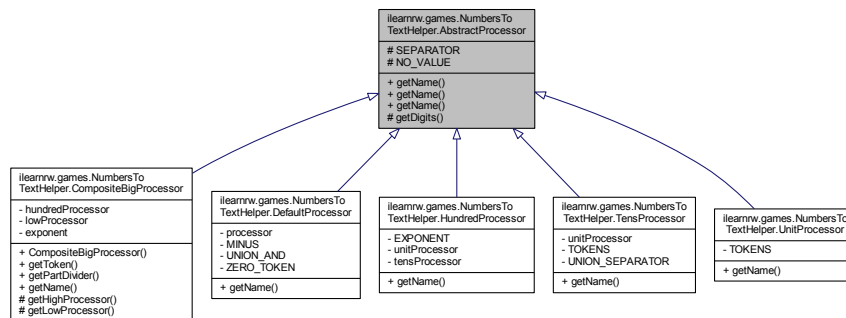

Change this scale to support American and modern British value (short scale) or Traditional British value (long scale)

7.15.3.3 `ScaleUnit []` `ilearnrw.games.NumbersToTextHelper.SCALE_UNITS` `[static], [private]`

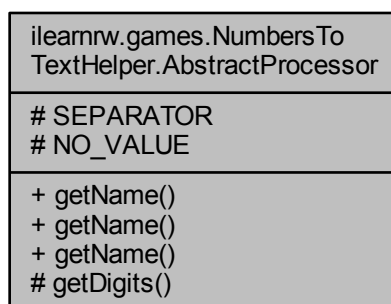

See http://www.wordiq.com/definition/Names_of_large_numbers

7.16 ilearnrw.games.NumbersToTextHelper.AbstractProcessor Class Reference

Inheritance diagram for ilearnrw.games.NumbersToTextHelper.AbstractProcessor:

Collaboration diagram for ilearnrw.games.NumbersToTextHelper.AbstractProcessor:

Public Member Functions

- String `getName` (long value)
- String `getName` (double value)
- abstract String `getName` (String value)

Protected Member Functions

- List< Integer > `getDigits` (long value)

Static Protected Attributes

- static final String `SEPARATOR` = " "
- static final int `NO_VALUE` = -1

7.16.1 Member Function Documentation

7.16.1.1 `List<Integer> ilearnrw.games.NumbersToTextHelper.AbstractProcessor.getDigits (long value)` [protected]

7.16.1.2 `String ilearnrw.games.NumbersToTextHelper.AbstractProcessor.getName (long value)`

7.16.1.3 `String ilearnrw.games.NumbersToTextHelper.AbstractProcessor.getName (double value)`

7.16.1.4 `abstract String ilearnrw.games.NumbersToTextHelper.AbstractProcessor.getName (String value)` [pure virtual]

Implemented in [ilearnrw.games.NumbersToTextHelper.DefaultProcessor](#), [ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor](#), [ilearnrw.games.NumbersToTextHelper.HundredProcessor](#), [ilearnrw.games.NumbersToTextHelper.TensProcessor](#), and [ilearnrw.games.NumbersToTextHelper.UnitProcessor](#).

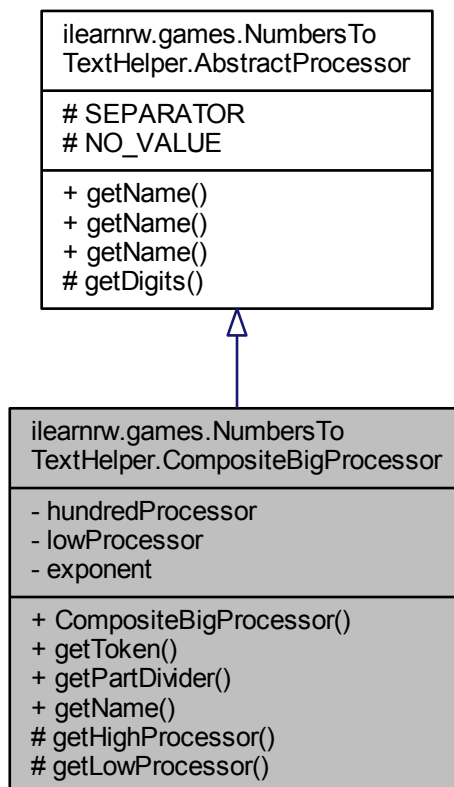

7.16.2 Member Data Documentation

7.16.2.1 `final int ilearnrw.games.NumbersToTextHelper.AbstractProcessor.NO_VALUE = -1` [static], [protected]

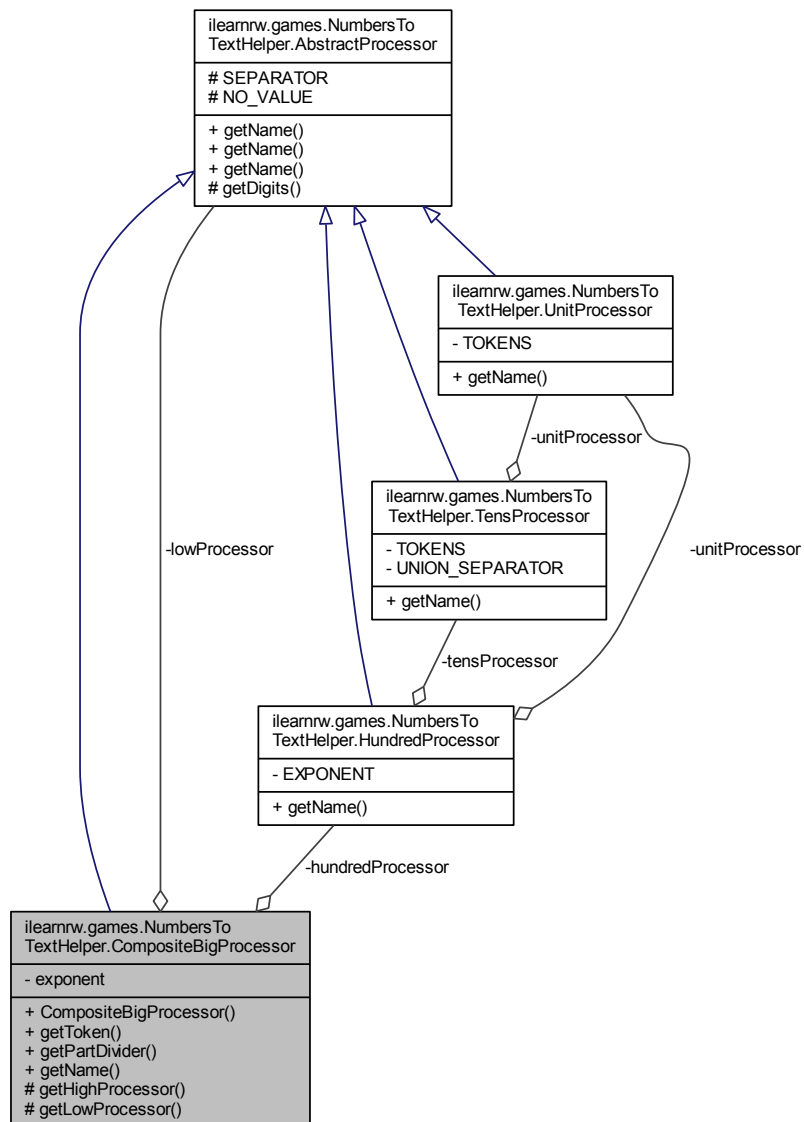

7.16.2.2 `final String ilearnrw.games.NumbersToTextHelper.AbstractProcessor.SEPARATOR = " "` [static], [protected]

7.17 ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor Class Reference

Inheritance diagram for ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor:

Collaboration diagram for ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor:

Public Member Functions

- [CompositeBigProcessor](#) (int [exponent](#))
- String [getToken](#) ()
- int [getPartDivider](#) ()
- String [getName](#) (String value)

Protected Member Functions

- [AbstractProcessor](#) [getHighProcessor](#) ()
- [AbstractProcessor](#) [getLowProcessor](#) ()

Private Attributes

- `HundredProcessor hundredProcessor = new HundredProcessor()`
- `AbstractProcessor lowProcessor`
- `int exponent`

Additional Inherited Members

7.17.1 Constructor & Destructor Documentation

7.17.1.1 `ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.CompositeBigProcessor (int exponent)`

7.17.2 Member Function Documentation

7.17.2.1 `AbstractProcessor ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.getHighProcessor ()`
[protected]

7.17.2.2 `AbstractProcessor ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.getLowProcessor ()`
[protected]

7.17.2.3 `String ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.getName (String value)` [virtual]

Implements `ilearnrw.games.NumbersToTextHelper.AbstractProcessor`.

7.17.2.4 `int ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.getPartDivider ()`

7.17.2.5 `String ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.getToken ()`

7.17.3 Member Data Documentation

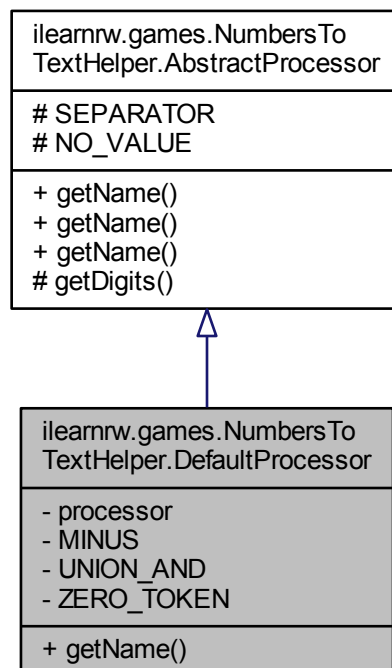

7.17.3.1 `int ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.exponent` [private]

7.17.3.2 `HundredProcessor ilearnrw.games.NumbersToTextHelper.CompositeBigProcessor.hundredProcessor = new HundredProcessor()` [private]

- int [mUserId](#)
- Date [mTimeStamp](#)

Static Private Attributes

- static final long [serialVersionUID](#) = 2L

7.54.1 Detailed Description

Todo Add some documentation about this class.

Add get/setters

7.54.2 Constructor & Destructor Documentation

7.54.2.1 `ilearnrw.user.UserAction.UserAction (String tag, String value, ApplicationId applicationId, int userId)`

Default constructor used by applications when logging a user action.

Parameters

<i>tag</i>	
<i>value</i>	
<i>applicationId</i>	
<i>userId</i>	

7.54.3 Member Function Documentation

7.54.3.1 `Calendar ilearnrw.user.UserAction.createRandomDate (int startYear, int endYear) [private]`

Todo : remove these after testing UserActions with UserActionFilter enough

7.54.3.2 `ApplicationId ilearnrw.user.UserAction.getApplicationId ()`

7.54.3.3 `String ilearnrw.user.UserAction.getTag ()`

7.54.3.4 `String ilearnrw.user.UserAction.getText ()`

7.54.3.5 `Date ilearnrw.user.UserAction.getTimeStamp ()`

7.54.3.6 `int ilearnrw.user.UserAction.getUserId ()`

7.54.3.7 `static int ilearnrw.user.UserAction.randBetween (int start, int end)` `[static], [private]`

7.54.3.8 `void ilearnrw.user.UserAction.setApplicationId (ApplicationId applicationId)`

7.54.3.9 `void ilearnrw.user.UserAction.setUserId (int userId)`

7.54.4 Member Data Documentation

7.54.4.1 `ApplicationId ilearnrw.user.UserAction.mApplicationId` `[private]`

7.54.4.2 `String ilearnrw.user.UserAction.mTag` `[private]`

7.54.4.3 `Date ilearnrw.user.UserAction.mTimeStamp` `[private]`

Not sure about the datatype Date. Does it contain the time as well? Might have to change.

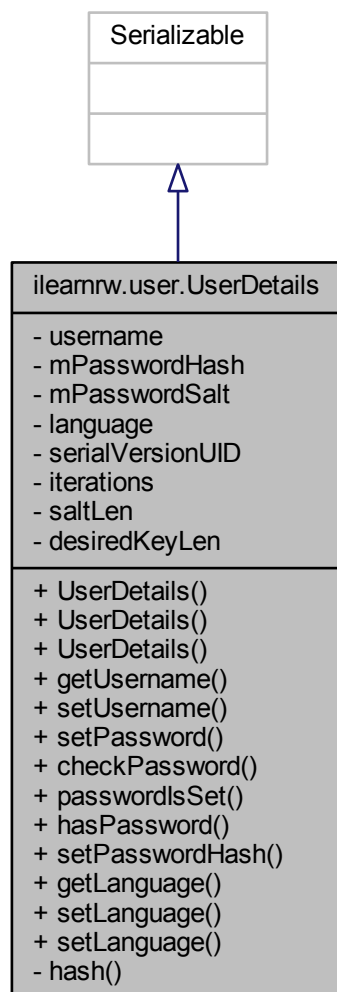

7.54.4.4 `int ilearnrw.user.UserAction.mUserId` `[private]`

7.54.4.5 `String ilearnrw.user.UserAction.mValue` `[private]`

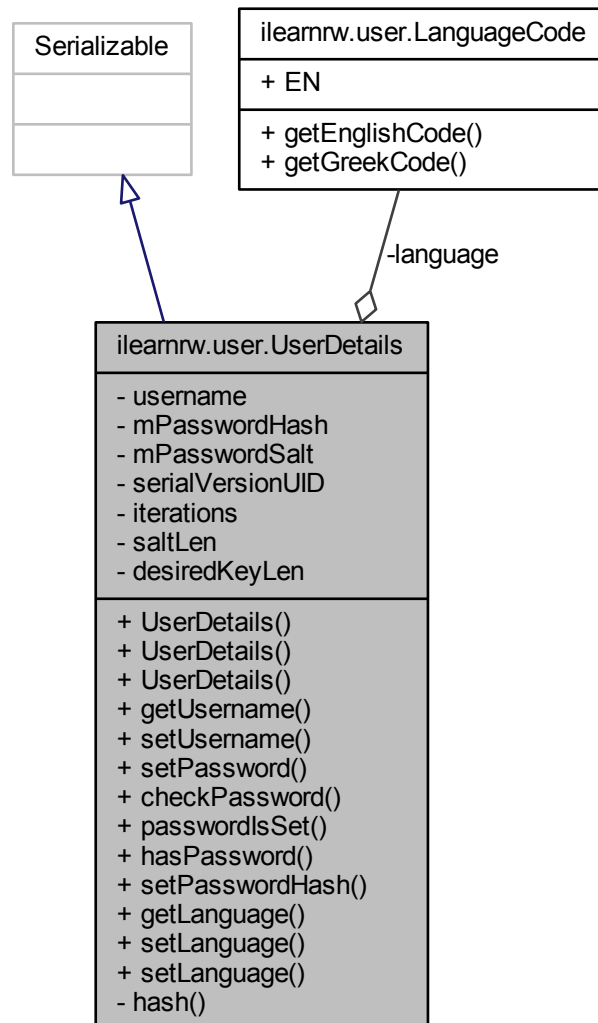

7.54.4.6 `final long ilearnrw.user.UserAction.serialVersionUID = 2L` `[static], [private]`

7.55 ilearnrw.user.UserDetails Class Reference

Inheritance diagram for ilearnrw.user.UserDetails:

Collaboration diagram for ilearnrw.user.UserDetails:

Public Member Functions

- [UserDetails](#) (String [username](#), int password, [LanguageCode](#) [language](#))
- [UserDetails](#) ([LanguageCode](#) [language](#))
- [UserDetails](#) (int [userId](#))
- String [getUsername](#) ()
- void [setUsername](#) (String [username](#))
- final void [setPassword](#) (String plaintextPassword)
- final boolean [checkPassword](#) (String plaintextPassword)
- boolean [passwordIsSet](#) ()
- boolean [hasPassword](#) ()
- final void [setPasswordHash](#) (byte[] [hash](#), byte[] salt)
- [LanguageCode](#) [getLanguage](#) ()
- void [setLanguage](#) ([LanguageCode](#) [language](#))
- void [setLanguage](#) (byte languageCode)

Static Private Member Functions

- static byte[] [hash](#) (String plaintextPassword, byte[] salt) throws NoSuchAlgorithmException, InvalidKeySpecException

Private Attributes

- String [username](#)
- byte[] [mPasswordHash](#)
Stores hash(plainTextPassword + mPasswordSalt)
- byte[] [mPasswordSalt](#)
Stores the salt used to hash the password.
- [LanguageCode](#) [language](#)

Static Private Attributes

- static final long [serialVersionUID](#) = 1L
- static final int [iterations](#) = 10*1024
- static final int [saltLen](#) = 32
- static final int [desiredKeyLen](#) = 256

7.55.1 Constructor & Destructor Documentation

7.55.1.1 `ilearnrw.user.UserDetails.UserDetails (String username, int password, LanguageCode language)`

7.55.1.2 `ilearnrw.user.UserDetails.UserDetails (LanguageCode language)`

7.55.1.3 `ilearnrw.user.UserDetails.UserDetails (int userId)`

7.55.2 Member Function Documentation

7.55.2.1 `final boolean ilearnrw.user.UserDetails.checkPassword (String plaintextPassword)`

7.55.2.2 `LanguageCode ilearnrw.user.UserDetails.getLanguage ()`

7.55.2.3 `String ilearnrw.user.UserDetails.getUsername ()`

7.55.2.4 `static byte [] ilearnrw.user.UserDetails.hash (String plaintextPassword, byte[] salt) throws
NoSuchAlgorithmException, InvalidKeySpecException [static],[private]`

7.55.2.5 `boolean ilearnrw.user.UserDetails.hasPassword ()`

7.55.2.6 `boolean ilearnrw.user.UserDetails.passwordIsSet ()`

7.55.2.7 `void ilearnrw.user.UserDetails.setLanguage (LanguageCode language)`

Parameters

<i>the</i>	language code as a enum item
------------	------------------------------

7.55.2.8 `void ilearnrw.user.UserDetails.setLanguage (byte languageCode)`

Parameters

<i>the</i>	language code as a enum item
------------	------------------------------

7.55.2.9 final void ilearnrw.user.UserDetails.setPassword (String *plaintextPassword*)

7.55.2.10 final void ilearnrw.user.UserDetails.setPasswordHash (byte[] *hash*, byte[] *salt*)

7.55.2.11 void ilearnrw.user.UserDetails.setUsername (String *username*)

7.55.3 Member Data Documentation

7.55.3.1 final int ilearnrw.user.UserDetails.desiredKeyLen = 256 [static],[private]

7.55.3.2 final int ilearnrw.user.UserDetails.iterations = 10*1024 [static],[private]

7.55.3.3 LanguageCode ilearnrw.user.UserDetails.language [private]

7.55.3.4 byte [] ilearnrw.user.UserDetails.mPasswordHash [private]

Stores hash(plainTextPassword + mPasswordSalt)

Note

In the future we might want to change this to store the value in a base64 encoded String;

7.55.3.5 byte [] ilearnrw.user.UserDetails.mPasswordSalt [private]

Stores the salt used to hash the password.

Note

In the future we might want to change this to store the value in a base64 encoded String;

7.55.3.6 final int ilearnrw.user.UserDetails.saltLen = 32 [static],[private]

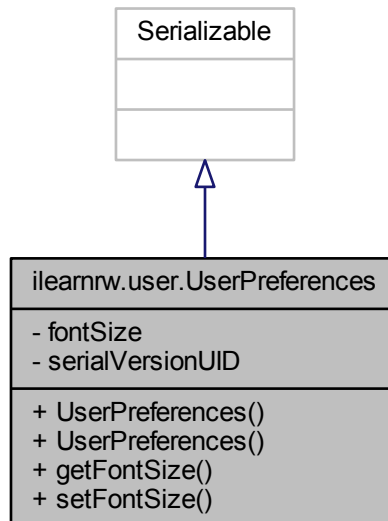

7.55.3.7 final long ilearnrw.user.UserDetails.serialVersionUID = 1L [static],[private]

7.55.3.8 String ilearnrw.user.UserDetails.username [private]

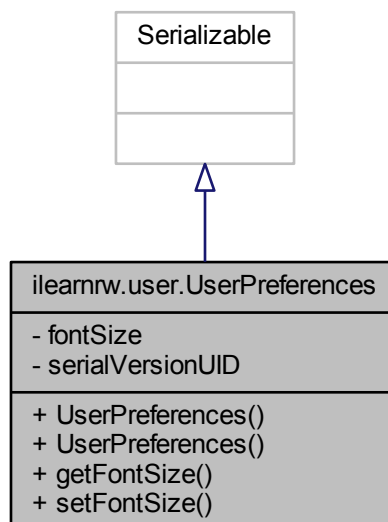

Todo Something to think about is whether this should be case-sensitive and if unicode should be supported. Unicode can create some headaches, there was a blog post about this recently (of which i only read the headline) see: <http://labs.spotify.com/2013/06/18/creative-usernames/>

7.59.1 Constructor & Destructor Documentation

7.59.1.1 `ilearnrw.user.UserProfile.UserProfile (LanguageCode language, UserProblemsList problems, UserPreferences preferences)`

7.59.1.2 `ilearnrw.user.UserProfile.UserProfile (LanguageCode language)`

7.59.1.3 `ilearnrw.user.UserProfile.UserProfile ()`

7.59.1.4 `ilearnrw.user.UserProfile.UserProfile (int userId)`

7.59.2 Member Function Documentation

7.59.2.1 `LanguageCode ilearnrw.user.UserProfile.getLanguage ()`

7.59.2.2 `UserPreferences ilearnrw.user.UserProfile.getPreferences ()`

7.59.2.3 `UserProblemsList ilearnrw.user.UserProfile.getProblemsList ()`

7.59.2.4 `void ilearnrw.user.UserProfile.setLanguage (LanguageCode language)`

7.59.2.5 `void ilearnrw.user.UserProfile.setPreferences (UserPreferences preferences)`

7.59.2.6 `void ilearnrw.user.UserProfile.setProblemsList (UserProblemsList problems)`

7.59.3 Member Data Documentation

7.59.3.1 `LanguageCode ilearnrw.user.UserProfile.language [private]`

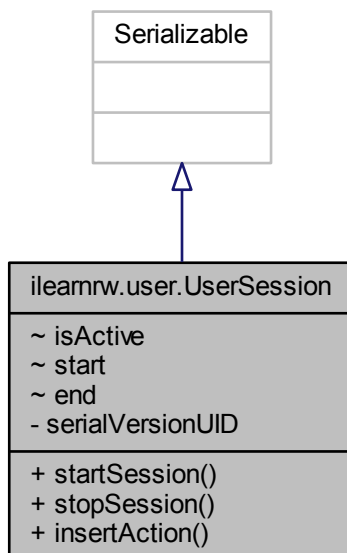

7.59.3.2 `UserPreferences ilearnrw.user.UserProfile.preferences [private]`

7.59.3.3 `UserProblemsList ilearnrw.user.UserProfile.problems [private]`

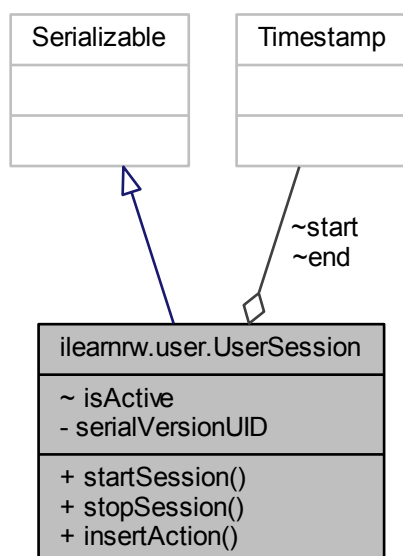

7.59.3.4 `final long ilearnrw.user.UserProfile.serialVersionUID = 1L [static], [private]`

7.60 ilearnrw.user.UserSession Class Reference

Inheritance diagram for ilearnrw.user.UserSession:

Collaboration diagram for ilearnrw.user.UserSession:

Public Member Functions

- void [startSession](#) ()
- void [stopSession](#) ()
- void [insertAction](#) ([UserAction](#) x) throws [IlearnException](#)

Package Attributes

- boolean [isActive](#)
- Timestamp [start](#)
- Timestamp [end](#)

Static Private Attributes

- static final long [serialVersionUID](#) = 1L

7.60.1 Detailed Description

Note

At the moment there will be issues if a user has 2 concurrent sessions. The reason for this is that the User-Actions are not tied directly to a session. To fix: Add deviceid to session and actions.

7.60.2 Member Function Documentation

7.60.2.1 void [ilearnrw.user.UserSession.insertAction](#) ([UserAction](#) x) throws [IlearnException](#)

7.60.2.2 void [ilearnrw.user.UserSession.startSession](#) ()

sets the timestamp and turns the boolean variable 'isActive' to true!

7.60.2.3 void [ilearnrw.user.UserSession.stopSession](#) ()

sets the timestamp and turns the boolean variable 'isActive' to true!

7.60.3 Member Data Documentation

7.60.3.1 Timestamp [ilearnrw.user.UserSession.end](#) [package]

7.60.3.2 boolean [ilearnrw.user.UserSession.isActive](#) [package]

7.60.3.3 final long [ilearnrw.user.UserSession.serialVersionUID](#) = 1L [static],[private]

7.60.3.4 Timestamp [ilearnrw.user.UserSession.start](#) [package]
